Using Secure FTP is a great way to add security to your site. Regular FTP sends the username and password in plain text.

Using Secure FTP is a great way to add security to your site. Regular FTP sends the username and password in plain text. To Secure you FTP connection there is two choices, SSH which uses a secure shell. The problem with using SSH for FTP is that the user must have a username and password for the Linux server. Of course this would not be a username with root access, but even without root access the username and password in the wrong hands can be very dangerous. It can be very time consuming and confusing for a Linux noobie to only allow the ssh username access to FTP.

```
{geshibot}/**  
* Replaces the geshi default classes with mambo/joomla classes  
*/  
function replaceGeshiWithMamboClasses() {  
  if (document && document.getElementsByTagName) {  
  
    var pre_items = document.getElementsByTagName('pre');  
  
    var n = pre_items.length;  
  
    for(var i = 0; i < n; i++) {  
  
      // divs  
  
      var divs = pre_items[i].getElementsByTagName('div');  
  
      var dlen = divs.length;  
  
      for (var j = 0; j < dlen; j++) {  
  
        if (divs[j].className == 'head') { // header  
          var className = 'sectiontableheader';  
        } else if (divs[j].className == 'foot') { // footer  
          var className = 'small';  
        } else if (divs[j].className == '') { // code lines  
          var className = 'sectiontableentry1';  
        } else {  
          var className = '';
```

```
    }  
    divs[j].className += ' '+className;  
  }  
  
  // anchors  
  var a_items = pre_items[i].getElementsByTagName('a');  
  var alen = a_items.length;  
  for (var l = 0; l < alen; l++) {  
    a_items[l].target = '_blank';  
    a_items[l].setAttribute('target', '_blank');  
  }  
  
  // list items  
  var li_items = pre_items[i].getElementsByTagName('li');  
  var ilen = li_items.length;  
  for (var k = 0; k < ilen; k++) {  
    li_items[k].className += ' sectiontableentry1';  
  }  
}  
}  
}  
}  
  
// initiate our class replacements  
addLoadEvent(replaceGeshiWithMamboClasses);{/geshibot}
```
